

Internship Report
of
Web Development

Submitted

To

School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
B.Tech CSE

By

Roll Number of Student: 25scs1003004120

Name of Student: KEERTIKA NEGI

Batch: 2026-2027

CANDIDATE'S DECLARATION

I Keertika Negi, hereby declare that this internship report entitled “Internship at Shri Banke Bihari Educational Society, Ramnagar, Uttarakhand” is a genuine record of the work carried out by me during my internship period.

This report has been prepared by me under the guidance of my faculty and is submitted to IILM University, Greater Noida, in partial fulfillment of the requirements for the award of the degree of Bachelor of Technology in Computer Science & Engineering.

I further declare that this report is based on my own learning and observations, and has not been submitted to any other university or institution for the award of any degree, diploma, or certificate.

Student Name: Keertika Negi

Roll No.: 25scs1003004120

ACKNOWLEDGEMENT

I feel truly grateful to Shri Banke Bihari Educational Society, Ramnagar, Uttarakhand, for giving me the chance to complete my internship and learn beyond the classroom. This experience helped me understand how theoretical knowledge connects with real-world applications, and I deeply appreciate the guidance I received during my time there.

I would also like to thank my faculty at IILM University, Greater Noida, for their constant support and encouragement. Their advice and feedback motivated me to stay focused and complete this report with sincerity.

My heartfelt thanks go to my mentors and colleagues at the organization, who were always ready to help and share their knowledge. Their cooperation made my internship journey smooth and enriching.

Lastly, I am thankful to my family and friends for standing by me and encouraging me throughout this period. Their support gave me the confidence to finish my internship successfully.

Internship Offer Letter

Date: 11/05/2026

To,
Keertika Negi
Ramnagar, Uttarakhand
Subject: Offer Letter for Internship

Dear Keertika Negi,

We are pleased to offer you an internship position with Shri Banke Bihari Educational as a Internship Role in a Website Management department. Your skills, enthusiasm, and interest in website development impressed us, and we are excited to have you join our team.

Your internship will commence on 10/06/2026 and continue until 09/07/2026 for a duration of 4 weeks.

Internship Details:

Designation: Junior Web Developer
Department/Project: Website Management
Reporting To: Anuj Kumar (HR)

Working Hours: Monday to Friday, 10:00 AM to 4:00 PM

Location: Paith Parao Road, Ramnagar, Nainital

4. PROJECT DESCRIPTION

4.1 Introduction

The internship project at Shri Banke Bihari Educational Society gave me an opportunity to understand how web development is used in an educational organization. As a Junior Web Developer, I worked on tasks related to the development, improvement, and maintenance of web-based platforms. The project helped me connect the concepts I had learned in college with their practical implementation.

During the internship, I gained an understanding of website structure, user interface design, basic functionality, content management, and website maintenance. I also learned that developing a website is not only about writing code, but also about making information easy to access and creating a simple and user-friendly experience for visitors.

4.2 Organization Profile

Shri Banke Bihari Educational Society is an educational organization committed to promoting learning and supporting the academic and overall development of students. The society provides educational opportunities through its institutions, academic programs, facilities, and student-oriented activities. Its efforts focus on creating a supportive learning environment where students can develop knowledge, skills, discipline, and confidence.

The organization uses digital platforms to share important information about its educational services, programs, facilities, activities, admissions, and institutional updates. These platforms enable students, parents, staff members, and visitors to access relevant information conveniently and stay informed about the organization's activities.

During my internship, I had the opportunity to work in this educational environment and understand how web development supports the organization's communication and administrative activities. This experience helped me recognize the importance of presenting institutional information accurately, clearly, and systematically. It also enabled me to understand how a well-designed and regularly maintained website can improve accessibility, strengthen communication, and enhance the organization's professional digital presence.

4.3 Problem Statement

Shri Banke Bihari Educational Society is an NGO working in the field of education and social development. It aims to support students and contribute to the overall improvement of the community through educational activities and related initiatives. For an organization like this, having a clear and informative online presence is important because it helps students, parents, staff, volunteers, and other visitors learn about its work and activities.

If the website is not properly organized, regularly updated, or easy to use, visitors may face difficulty finding important information about the NGO, its educational programs, services, notices, and other activities. Therefore, the main purpose of the project was to contribute to the development and improvement of the organization's web platform. The work focused on improving the structure, presentation, functionality, and overall usability of the website.

The project aimed to make the website more accessible and convenient for users while presenting the NGO's information in a clear and organized manner. Through this work, the website could better support the organization's communication with the community and help visitors understand its educational and social initiatives.

4.4 Project Objectives

The main objectives of the internship project were:

- To understand the practical process of web development in an NGO and social development organization.
- To apply the web development concepts learned during academic studies to real-world projects.
- To contribute to the development and maintenance of websites and web-based platforms related to the organization's programs and activities.
- To improve the structure, design, and presentation of web pages.
- To create simple, responsive, and user-friendly interfaces for different types of users.
- To support the online presentation of the organization's social initiatives, projects, services, and community development activities.
- To organize and update website content in a clear, accurate, and accessible manner.

- To improve the accessibility of important information for beneficiaries, volunteers, donors, partners, and other stakeholders.
- To identify and resolve basic issues related to website functionality, layout, responsiveness, and usability.
- To gain practical experience in working as a Junior Web Developer in a professional NGO environment.
- To understand how web technologies can support social awareness, public communication, transparency, and outreach.
- To develop professional skills such as teamwork, communication, problem-solving, testing, debugging, and project coordination.
- To understand the role of digital platforms in promoting the objectives and social impact of the organization.

4.5 Scope of the Project

The scope of the project mainly covers the development, improvement, and maintenance of web-based platforms used by Shri Banke Bihari Educational Society. The work includes designing and modifying web pages, organizing educational information, improving the user interface, and making the website easier for students, parents, staff, and other visitors to navigate.

The project also provides opportunities for future improvements, such as adding new features, improving website responsiveness, enhancing performance, updating institutional information, and making the platform more accessible across different devices. The knowledge and experience gained during the internship can also be applied to the development of similar websites and digital solutions for educational societies and institutions.

4.6 Technologies and Tools Used

The project involved the use of various web development technologies and tools. The technologies were selected according to the requirements of the project and the tasks assigned during the internship.

- **HTML:** Used to create the basic structure and content of web pages.
- **CSS:** Used for designing web pages, layouts, spacing, fonts, and overall appearance.
- **JavaScript:** Used to add basic interactivity and dynamic functionality to web pages.

- **Bootstrap:** Used where required to create responsive and mobile-friendly layouts.
- **Visual Studio Code:** Used as the primary code editor for writing and modifying code.
- **Web Browser/Developer Tools:** Used for testing the website, identifying errors, and checking the appearance and functionality of web pages.

These tools helped me understand the complete basic workflow of developing, testing, and improving a website.

4.7 System Architecture

The system uses a basic web-based architecture that allows users to access the website through a web browser. When a user opens the website, the browser sends a request to the web server. The server processes the request and returns the required web pages and content, which are then displayed in the browser.

The main components of the system architecture are:

- **User:** The person who accesses and interacts with the website.
- **Web Browser:** The application used to open and view the website.
- **Web Server:** Processes user requests and delivers the required web pages and resources.
- **Website/Application:** Contains the website's structure, design, content, and functionality.
- **Database:** Stores, manages, and retrieves information when required.

The front end of the system manages the appearance and user interaction of the website. It includes the following technologies:

- **HTML:** Used to create the structure and content of web pages.
- **CSS:** Used to design the layout, colors, fonts, spacing, and other visual elements.
- **JavaScript:** Used to add interactive features and dynamic behavior.
- **Server-Side Application:** Used, if required, to process data and manage communication between the website and database.
- **Database:** Used, if required, to store and retrieve website-related information.

The overall architecture can be represented as:

User → Web Browser → Web Server → Website/Application → Database (if required)

The working process of the system can be summarized as follows:

1. The user opens the website through a web browser.
2. The browser sends a request to the web server.
3. The web server processes the request.
4. The website or application retrieves the required content.
5. The database provides information if data storage or retrieval is required.
6. The server sends the requested content back to the browser.
7. The browser displays the web page to the user.

This architecture enables users to access the organization's information through a simple, organized, and user-friendly digital platform.

4.8 Methodology

The project was completed using a systematic and practical approach. Initially, I familiarized myself with Shri Banke Bihari Educational Society, its web platform, and the responsibilities assigned to me as a Junior Web Developer. I studied the existing website structure, content, layout, and functionality to understand how the platform supported the organization's communication and information-sharing needs.

After understanding the project requirements, I identified areas that required improvement, such as page structure, content organization, user interface, navigation, responsiveness, and basic functionality. I then planned the required changes and implemented them using the appropriate web development technologies, including HTML, CSS, JavaScript, and other tools used during the internship.

Once the development work was completed, the updated web pages were tested using web browsers and developer tools. Testing was carried out to verify the functionality, layout, responsiveness, readability, and compatibility of the pages on different screen sizes. Any errors, inconsistencies, or usability issues identified during testing were corrected through debugging and further improvements.

The basic methodology followed during the project was:

Organization and Requirement Understanding → Website Analysis → Planning → Development → Testing → Debugging → Improvement → Final Implementation

This systematic approach helped me complete the assigned tasks in an organized manner. It also improved my understanding of the complete web development process, including requirement analysis, implementation, testing, debugging, and maintenance. Through this methodology, I learned the importance of reviewing and testing a website carefully before making the final changes available to users.

4.9 Expected Outcomes

The project contributed to a more organized, accessible, and user-friendly web presence for Shri Banke Bihari Educational Society. The improvements made to the website helped students, parents, staff, and other visitors find and understand the required information more easily.

From a learning perspective, the internship provided me with practical knowledge of web development and helped me understand how websites are developed, tested, and maintained in a professional environment. It also improved my problem-solving, debugging, communication, and teamwork skills. Most importantly, the project gave me valuable experience in applying classroom concepts to real-world requirements.

4.10 Certificates of Completion and Communication Proof

The Internship Offer Letter and the Internship Completion Certificate issued by Shri Banke Bihari Educational Society, confirming my successful completion of the internship as a Junior Web Developer from 11th June 2026 to 11th July 2026, are attached in Chapter 3 of this report.
